integraRental, an industry-leading rental management system, now features one of the industry's first integrations with a warehouse management system. integraRental & integraWMS working together is the solution for organizations with product inventory management needs. This integration is aimed at improving product inventory accuracy, reducing headcount, gaining visibility to product inventory, and serving customers faster.

STREAMLINED INVENTORY MANAGEMENT

- Create confidence in the accuracy of your picking.
- integraWMS enables quicker order fulfillment and invoicing by taking pickers on the most effcient path through the warehouse.
- Locate the product inventory you're looking for quicker with barcode scanning, scannable bin locations, and product images shown directly within the mobile view.
- Promote better customer communications with accurate real-time order statuses available to counter workers (including Yard in Progress, Yard Complete, and Customer Picked Up).
- Faster product picking directly improves rental checkout experiences, reducing customer wait times.

REAL-TIME ACCURACY WITH CYCLE COUNTING

- Cycle count in real time to avoid shut down of operations to count inventory.
- Empower your warehouse team to immediately correct inventory discrepancies when identified (*pictured at right*).
- Create cycle count profiles that allow you to count high value and high turning products more frequently.
- Enable supervisor-level oversight to flagged bins and products prior to making inventory adjustments (*pictured below*).

INTELLIGENT PRODUCT RECEIVING AND PUT AWAY

• Directed put away takes the guesswork out of where inventory goes, enabling a quick learning curve and removing obstacles to business scaling.

Cycle Count Administration

- Turn that inventory faster! Enable customer service to know instantly when inventory is available for sale based on real-time updates from receiving.
- Capture and communicate vendor shorts, outages, and overships to purchasing in real time.
- Barcode unlabeled products during the receiving process to promote efficient handling of inventory throughout its lifecycle.
